

Support services

SPEECH THERAPY

The Speech Therapy Department provides stimulus and intervention which enable students to overcome those difficulties that can appear in different areas of language and communication at any point in their academic career. During the school day, individually or in small groups, our team of specialists deal with issues such as:

- » Difficulties in articulating sounds
- » Language disorders
- » Communication skills
- » Support for literacy and numeracy
- » Intervention with learning difficulties (dyslexia, dysgraphia and dyscalculia)

- » Myofunctional therapy for problems associated with breathing, chewing and swallowing
- » Voice disorders

The sessions are conducted in a fun way using manipulative, interactive games, as well as different methodologies and specific exercises for each student, so that they acquire and assimilate their learning naturally.
